Overview

The XBee family of ZigBee/802.15.4 RF modules is the premiere choice for OEMs looking for excellent wireless performance in a cost-effective, small form factor solution. Each XBee module comes in either a regular or long-range “-PRO” version*. All XBee modules are pin-for-pin compatible with the exception of a few varying I/O features, which provides a standard footprint for OEMs with multiple applications.

XBee Series 1 is based on ZigBee/802.15.4 silicon from Freescale®. Its 802.15.4 firmware feature set makes it ideal for point-to-point, peer-to-peer, and point-to-multipoint (star) topologies. The XBee Series 1 gives the user maximum control over network nodes and minimum latency.

XBee Series 2 is based on ZigBee/802.15.4 silicon from Ember™. It features ZigBee firmware for creating ad-hoc mesh networks. The XBee Series 2 performs automatic route discoveries to create a self-healing network of full-function routers and low-power end devices. XBee Series 1 and Series 2 modules do not communicate with one another.

Known for ease of use, the XBee modules are ready to operate out of the box and offer simple AT commands or an API for advanced, user-settable configurations. XBee modules are recognized worldwide for reliable wireless data communication in the license-free 2.4 GHz ISM band. Visit our website for a complete listing of countries that have approved the XBee as a certified, license-free RF module with no need for further testing.

XBee modules are a part of Digi's full line of Drop-in Networking products. ConnectPort X gateways and XBee device adapters, modules and extenders provide end-to-end wireless connectivity to commercial-grade electronic devices in locations where wired infrastructure does not exist or satisfy customer needs.
